

2021 Curly Leaf Pondweed Treatment Update

The 2021 spring curly leaf pondweed treatment was completed on Friday 5/21. Diquat herbicide was used and applied to 103 acres of the lake, please see the map below showing the treated areas. Due to native plant presence at the time of our spring survey, the DNR significantly reduced the amount of area we were approved to treat for curly leaf pondweed. A request was made to treat all areas where curly leaf was present and it was denied. If you have an option to treat your own shoreline area, please feel free to do so appropriately and in compliance with DNR regulations.

See page 2 for a map of the treatment tracks.
